

seal-IT:
The economical solution

Work with **seal-IT** bulk material covers! Easy to handle, economical, space-saving, individually adaptable and universally applicable. This saves you a lot of trouble and costs! Why? A small calculation example: The content of an octabin weighs between 800 and 1,200 kg, whereby one kilogram of raw material costs between 3 and 20 euros. This means that the cost of a filled octabin is between 2,400 and 20,000 Euros. And you certainly don't have just one of these in your company! A breakdown due to material contamination will cost you between one hour and 2 days of time, depending on the repair effort. Production downtime and maintenance costs – therefore, the purchase of a **seal-IT** bulk material cover pays for itself within a few hours! It always pays off – because we have developed **seal-IT** from processors, for processors!

“seal-IT: Processors have been waiting for a long time for this affordable bin cover!”

Saubere Sache

seal-IT covers offer a cost-effective and practical solution that protects resin in virtually any container (Gaylords, bins, or boxes) from contamination due to dust, moisture or other impurities. Unlike other, disposable container covers, Seal-It bulk covers offer lasting protection, featuring a durable, foldable, self-sealing design that can be used again and again.

Fast, clean and safe – this is **seal-IT!**

Keep your bulk resin safe and clean!

Material Management at it's Best!

Be clean

seal-IT bulk covers offer numerous advantages. Perhaps the best one is that they were developed by plastics processors for plastics processors. That's why they are:

- Easy to handle
- Intuitive to use
- Compact
- Reliable and reusable

No matter the contaminant – moisture, dust, particulates, dirt, or trash – Seal-It bulk covers offer protection, keeping your resin clean. How clean? Clean enough to reduce scrap rates, reduce contamination-related faults, and save production-staff time. That means less work, more benefit from multi-machine loading, less rework and maintenance, as well as reduced downtime.

Discover the practical use of our unique seal-IT bulk covers. You will see: They work perfectly!

The seal-IT motto: “From processors, for processors”

Remain clean

seal-IT represents a re-think of bulk cover design that makes, and keeps, your material storage, delivery, and production completely clean.

Our seal-IT bulk covers are:

- **Versatile** – Able to fit virtually bulk containers of any size (Gaylords, bins, or boxes), **5S-compliant**, corresponds to **zero granule loss**.
- **Configurable** – Equip them with up to three vacuum-wand openings (30 - 80 mm in size) for multi-machine loading.
- **Foldable** – For space-saving storage.
- Can be **made from various materials** and grounded against static charging.
- **Absorbent** – Available with moisture-absorbing device.
- **Adaptable** – Easily fitted with instruments and sensors (temperature, level, humidity, etc.).
- **Viewable** – Crystal-clear center section for easy viewing of contents.
- Completely **maintenance-free**.
- **Maintenance-free**, reuseable, **resource-saving**.

Stay clean

Every processor shares the same daily production questions: How do I keep bulk resin clean, dry, and ready for processing – without the need for additional preparation? How can I minimize or eliminate the risk of contamination by dirt, dust, or trash? How can I prevent properly-dried hygroscopic resins from adsorbing moisture?

The answer is simple: seal-IT bulk covers!

With the help of seal-IT covers, you can eliminate the wasted energy associated with re-drying material; the production, time and material lost when machines must be shut down and cleaned due to impurities; the risk of damage to conveying systems, auxiliary equipment, and processing machines.

seal-IT bulk covers eliminate these problems, and their costs, simply and safely.
